

Drug Development – promise and efficacy –

The “Challenge”

Drug Development teams strive to efficiently identify relationships between target molecules, disease characteristics, and cohort group genomics in order to design a clinical trial target patient profile (TPP) that drives high efficacy and ultimately maximizes a drug’s market potential.

The “Solution”

RYAILITI’s innovative knowledge engineering platform enables the deployment of a multi-dimensional digital twin ecosystem delivering groundbreaking actionable insights from a broader more complete *in-silico* testing environment that makes the drug discovery process faster, better, and less expensive while increasing efficiencies and mitigating bias
